

POSITION ANNOUNCEMENT

Position:

System Administrator

Location:

Applied Research Center, Jefferson Lab, Newport News, VA

Job Duties

The system administrator's job will include but is not limited to networking of computers at ARC. The computers have both Linux and Windows operating systems. An important part of the job will involve the maintenance of a license server for running ABAQUS. The person appointed will also assist in backing up huge data files generated from simulations and perform general maintenance to the computers and the network. The person should be present on site at Newport News at least once a week. ODU provides transportation from the main campus to ARC on daily basis.

Qualifications

The person candidate should a thorough knowledge of Linux, especially SUSE and Windows based operating systems experience. Some experience in networking is also essential.
